### † Doctor Edgar Mitchel writes:

“The problem of present-day medicine is that over centuries Western Scientific thought has been concentrated around a chemical model of organization and function of molecules, tissues and organs in our body. However, this biochemical model should be expanded to deeper levels by including electromagnetic and quantum processes that play a crucial role in self-organization of living nature.”

## Quantum Medicine and Terra Quant

By Prof. Samuel Edelstein

Quantum Medicine (QM) is a medical methodology which incorporates therapeutic effects of different electromagnetic fields, such as pulse laser radiance, broadband infrared radiance, visible red light and static magnetic field, in order to transform living cells from an unstable state of illness into a stable healthy state. One striking common denominator in all the clinical cases that QM is effective is inflammation. The sequence of events at the tissue level, which leads to the pathological state of inflammation is reduced micro-circulation with changes in blood supply to the cells, resulting in ischemic injury. Any influence that will be able to shorten the duration of the ischemic state will have beneficial effect on the course of the disease and the accompanying pain.

The radiances mentioned above are capable, within a few hours after irradiation of the painful tissue, to improve the supply of oxygen to the hypoxic cells, to improve the microcirculation and to remove toxic waste products from the site. The tissue is rejuvenated and the pains disappear. All the above is achieved by chemical processes in the cells that are responsive to bio-photons. The molecules in the cells that are capable to respond, called chromophores, are porphyrines, enzymes with antioxidant properties, mitochondrial cytochromes and molecules of oxygen. Their response will result in renewed energy production (ATP) and restoration of all impaired cellular functions.

**TerraQuant** is the only device available today, which combines together pulsed red light, pulsed broadband infrared light, superpulsed infrared laser and static magnetic field, providing their synergistic therapeutic effects. Incorporating all these radiances in one apparatus enables one to achieve rapid and efficient clinical effect within a relatively short time.
